

IVARSON IV Flo Saver - Benhil Equipment

Upgrade the existing oil filter on your Benhil 8300 and 8500 series printers and cartoners with a new IVARSON IV Oil Filter Adapter. Engineered to fit directly to the original machine housing and ported accordingly to the flow required, the adapter is a snap to install. The original oil filters would only take out large particles, which leads to clogged oil lines and reduced life of the mechanical components in your machine. Our adapter is supplied with a standard ZINGA screw on water separating oil filter, which is normally available from any local distributor. This adaptor is specifically engineered for easy installation, and the adapter will filter your oil down to 10 microns with water separation.

The Ivarson IV Flo Saver oil filter adapter is supplied with a gauge to indicate oil pressure so you know when the filter needs to be changed. Filter replacement takes minutes with the standard screw on filter element.

The combination of these features ensures mechanical components are properly lubricated with clean oil. This will prevent premature wear, reduce maintenance time and cost, and decrease down time required for repairs. This means more production from your machine!

Old Benhil 8360 Oil Filter System

Benhil 8360 Conversion

Our Electrical Engineers can also interface with your existing controls system to electronically monitor the status of the filter.
